

How to: Create a Generic Table

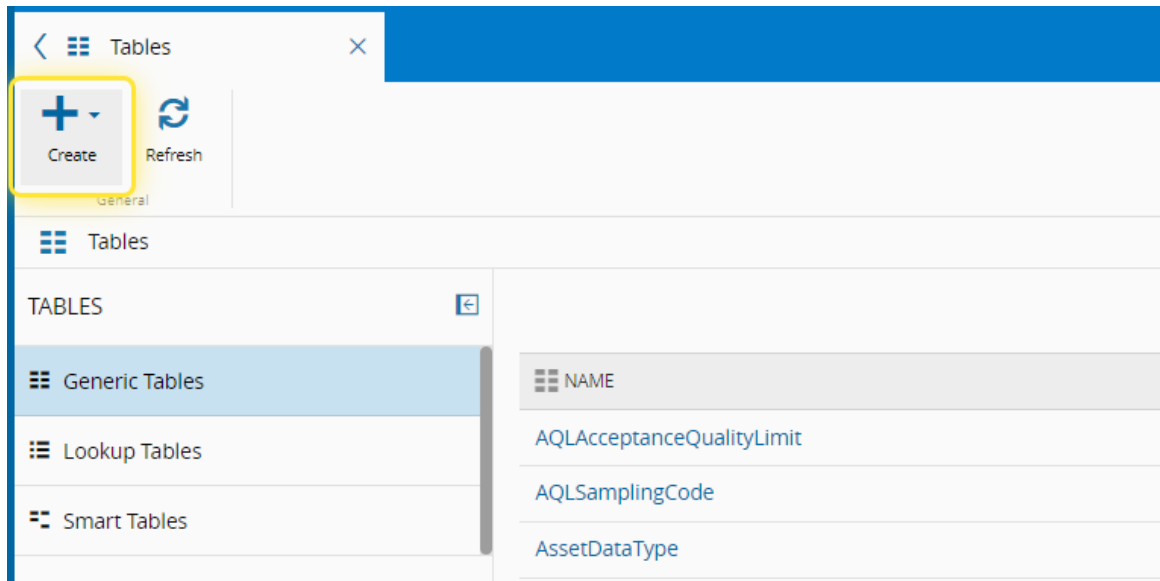

1. Go to the Administration menu.

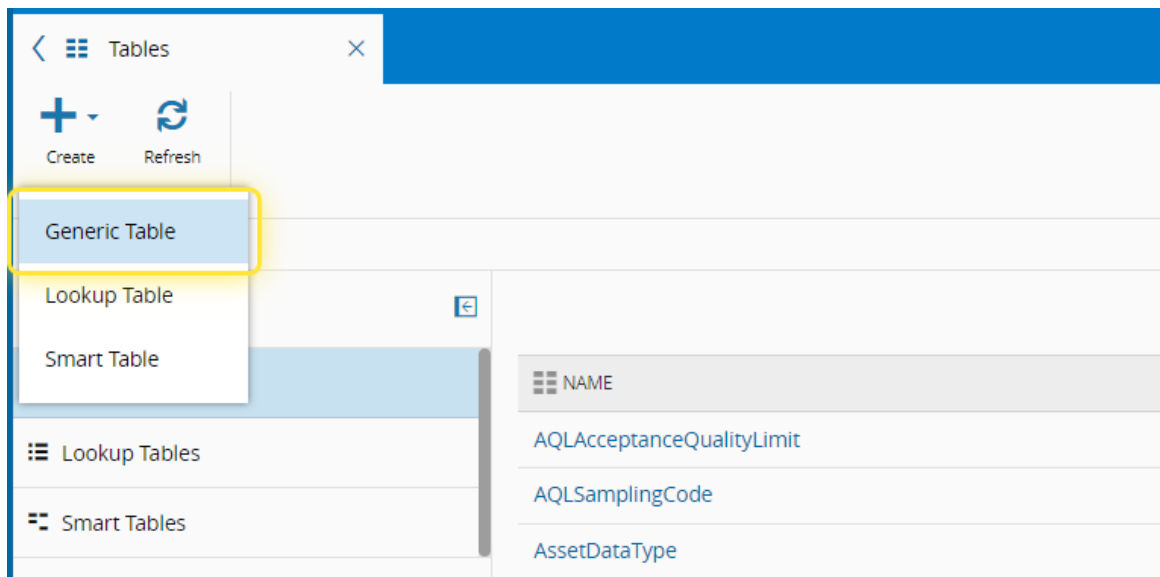

2. Select Tables.

3. Select the Create button.

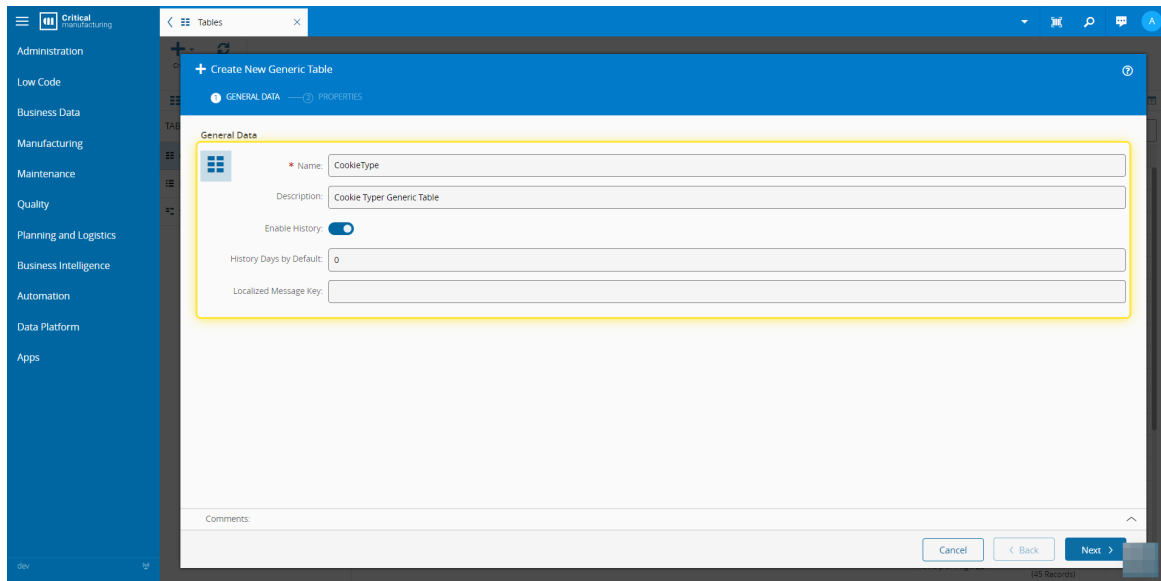

4. Select Generic Table.

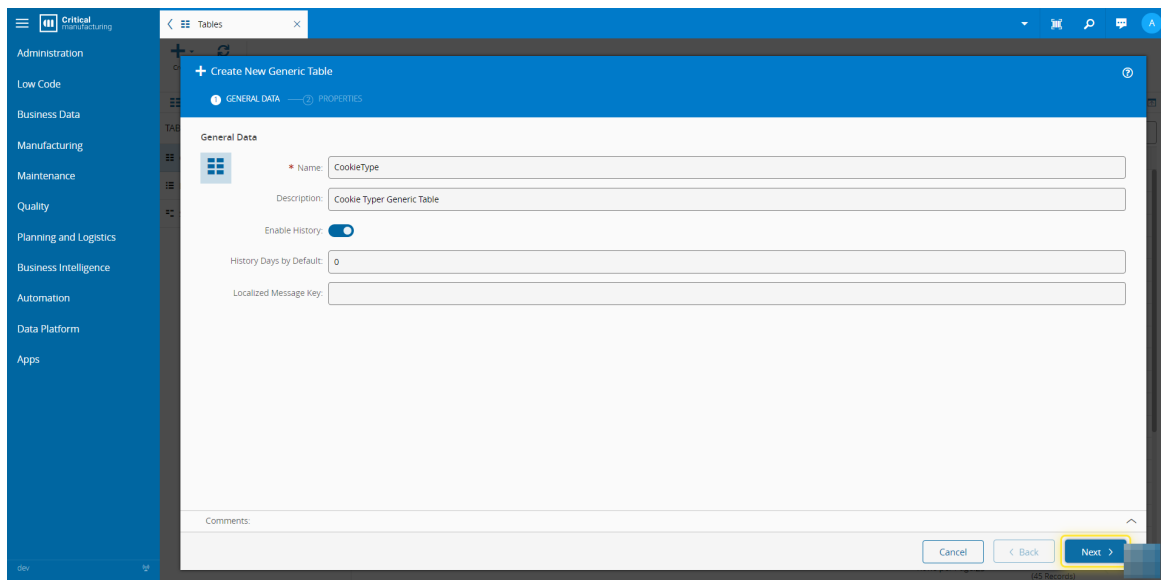

5. Under the General Data section, fill in all the necessary information.

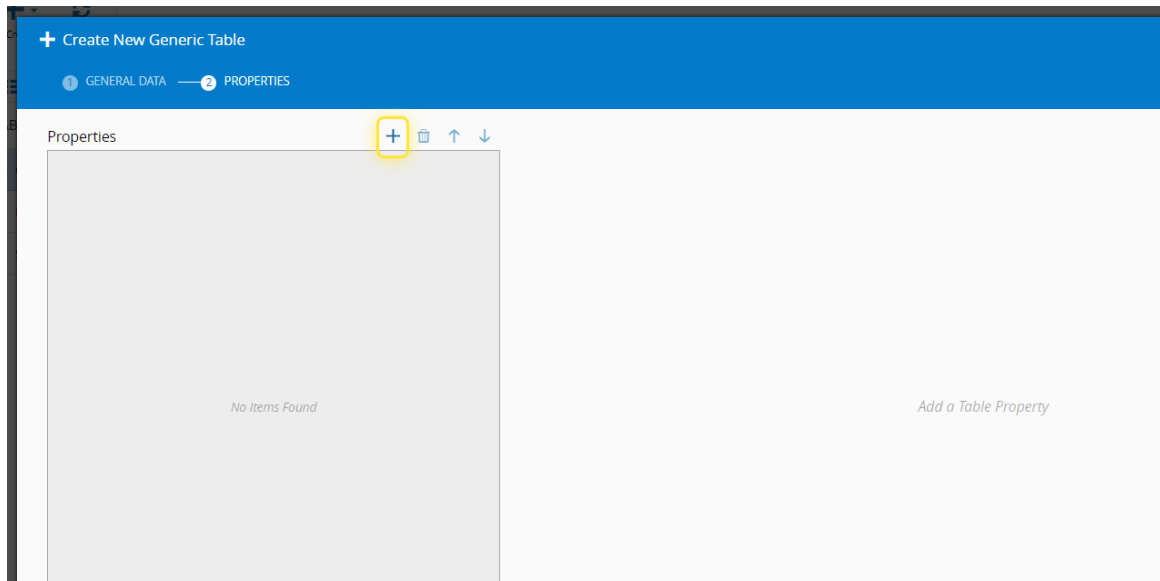

The name must not contain any whitespaces.

6. Select Next.

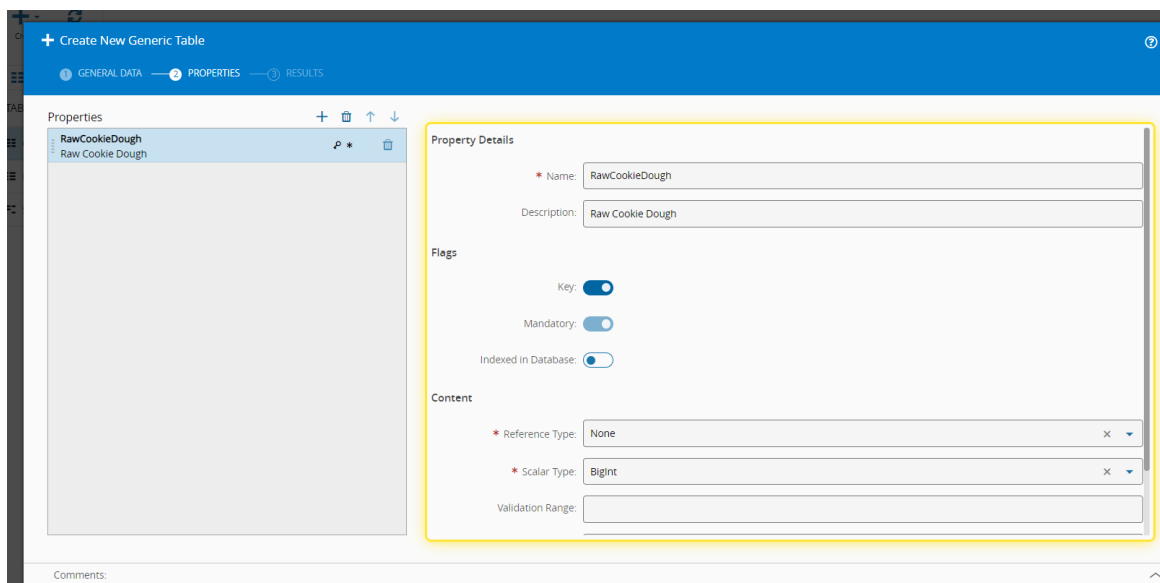

7. Select the + icon to add a new property.

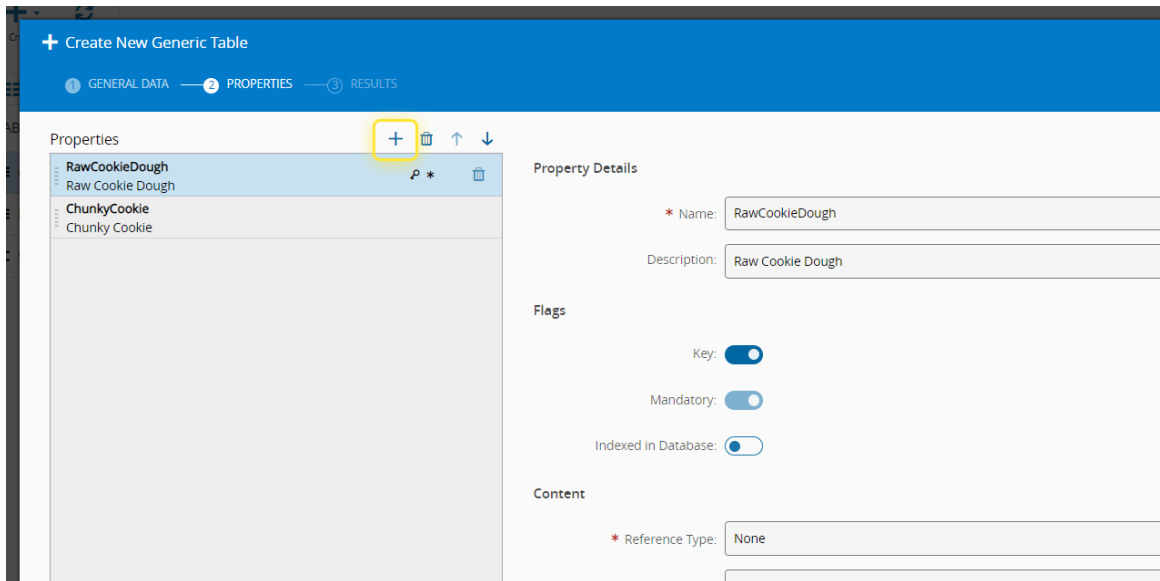

8. Fill in the necessary information under the Property Details.

The property name must not contain any whitespaces. Additionally, you must specify one property as the **Key** by enabling the corresponding toggle button.

9. Add as many properties as needed.

10. When finished, select the Create button to complete the operation.
