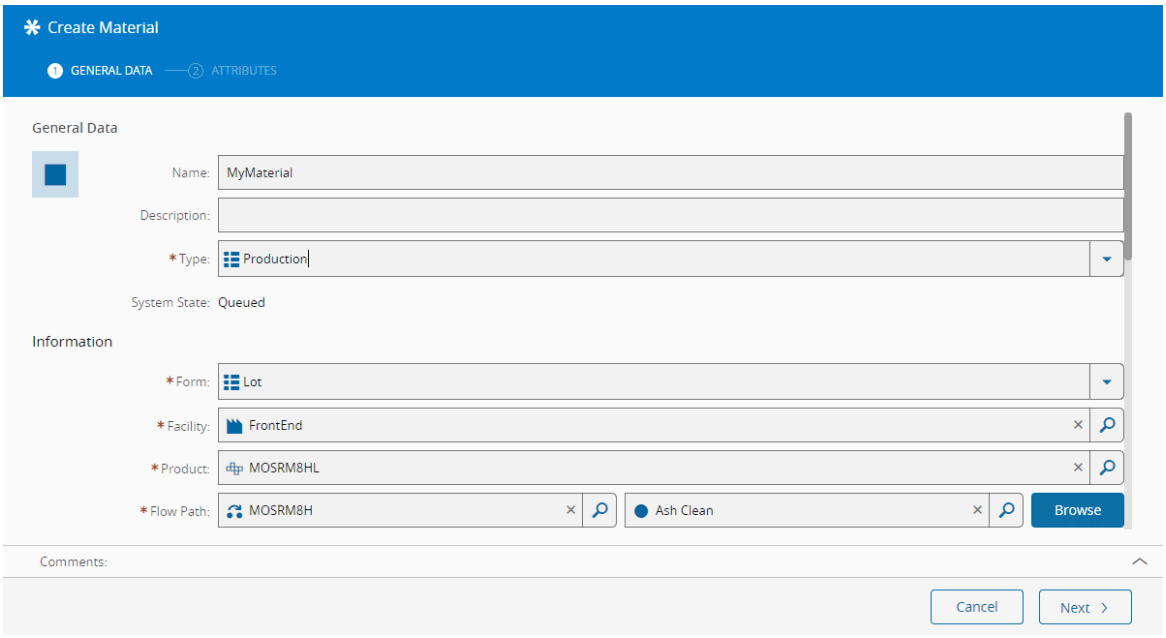
Using Flows

To use a **Flow**, it's only necessary to create a **Material** that references that **Flow**. Note that if a **Product** or **Product Group** define a default Flow Path, the **Material** will be assigned to that **Flow** by default when creating the **Material**. The **Material** will automatically follow the **Flow** as defined.



Info

The **Flow** and/or **Step** of a **Material** can be changed at any time using the **Change Material Flow/Step** action. For more information, see Change Material Flow/Step.
