It is released on condition that it shall not be copied in whole, in part or otherwise reproduced (whether by photographic, or any other method) and the contents therefore shall not be divulged to any person other than that of the addressee (save to other authorized offices of his organization having need to know such contents, for the purpose for which disclosure is made) without prior written consent of submitting company.

Modeling Options

Depending on what is more convenient, you can create an entire model directly in the Critical Manufacturing [MES GUI](#) or using the **Master Data Package**.

Using the GUI

This approach is the most standard process to create, manage, and modify [MES](#) entities instances. It offers a more interactive and user friendly, allowing you to create the entities directly or clone them from existing ones. However, you will not be able to easily create multiple complex entities directly in the [GUI](#), since this process can be painstakingly long.

Using the Master Data Package

This approach uses an Excel file following a pre-defined structure that the [MES](#) Master Data Package entity can read. You can do a bulk upload into CM [MES](#), but this requires a clear understanding of the sequence/order for creating the entities and entity fields, and how the [MES](#) tools interpret the Master Data.

For more information on the Excel file template, see [Excel Template](#).

For more information on how to actually load the Master Data you created, see [Master Data Packages](#).
